AHMED MOHAMED NOAMAN

Flutter Developer & Mobile Application Engineer | DevOps & Release Engineering

Alexandria, Egypt | noamana455@gmail.com | github.com/noaman03 | https://noaman03.github.io | LinkedIn

PROFESSIONAL SUMMARY

Flutter developer and Computer Engineering student who has taken a product from an empty repository to the stores: Strong 8K, a cross-platform live TV and on-demand streaming client for Android, Android TV and Windows, delivered end to end as a freelance engagement and published on Google Play and the Microsoft Store. Comfortable across the whole delivery path - Flutter and native Kotlin playback code, a Node.js service with nginx and systemd on Linux, white-label build tooling, CI, and app-store submission - and holds a DevOps Engineering Diploma from Andalusia covering Docker, Kubernetes, Terraform, Ansible, Jenkins, GitHub Actions, Argo CD, Prometheus and Grafana on AWS and Azure. Completed AMIT Learning's Flutter Diploma with a 95% grade.

FREELANCE EXPERIENCE

Freelance Flutter & Platform Developer - Strong 8K (streaming client)

Jul 2026 - Oct 2026

Freelance engagement as sole developer of a white-label streaming player for Android phones, tablets and D-pad TV boxes and for Windows desktop: live TV, movies, series, radio, EPG, time-shift, catch-up, downloads, device activation and parental controls. Published on Google Play and the Microsoft Store; App Store release in preparation.

Stack: Flutter, Dart, Provider, Kotlin (Media3/ExoPlayer platform view), libmpv via media_kit, Node.js, Express, React (react-admin), nginx, systemd, Let's Encrypt, Codemagic CI, MSIX

- Built the Flutter client - 173 Dart files, 51 screens, three locales with full RTL Arabic - with one UI over two playback engines (Media3/ExoPlayer on Android, libmpv on Windows).
- Designed server failover that distinguishes a blocked host from an expired subscription, authenticating candidate hosts concurrently and keeping the operator's priority order instead of the fastest responder.
- Fixed frozen-video-with-live-audio stalls by plumbing decoder frame counters from Kotlin across the platform channel into a pure-function playback watchdog.
- Moved a ~27 MB offline catalogue and ~118k-entry guide into isolate workers with delta sync, single-flight writes and crash-safe rename-on-complete, so weak TV boxes stay responsive.
- Wrote and deployed the reviewer demo service (Node.js/Express, 2,600 LOC, two dependencies, timing-safe auth) on Ubuntu behind nginx and TLS, with a 2,375-line idempotent installer and a 780-line post-deploy smoke test.
- Built a 1,800-line white-label build driver that turns one codebase into 15 brand configurations, restores every touched file on failure, and a Codemagic pipeline that runs analysis and 2,600+ tests and verifies the produced binary is a genuine release build.
- Grew the test suite with the code - 131 test files, 2,603 passing tests at the final commit - and took the app through Google Play and Microsoft Store (MSIX) review, including data-safety declarations and Android TV banner requirements.

Google Play | **Microsoft Store** | **Portfolio case study**

TECHNICAL SKILLS

Mobile Development: Flutter, Dart, Swift (iOS), Kotlin platform views and channels, Android TV / D-pad navigation, Media3/ExoPlayer, libmpv (media_kit), responsive and RTL UI

Architecture & State: Feature-first Clean Architecture, layered UI/domain/data design, SOLID, Riverpod, BLoC, Cubit, Provider, GetX, isolate-based background work

Backend & Data: Node.js, Express, REST API design, Firebase, Supabase Realtime, Cloud Firestore, SQLite, MySQL, React (react-admin)

DevOps & Delivery: Linux (Ubuntu, systemd, nginx, Let's Encrypt), Codemagic and GitHub Actions CI, Docker, Kubernetes, Jenkins, Terraform, Ansible, Argo CD, Prometheus, Grafana, AWS, Azure; Google Play and Microsoft Store (MSIX) release engineering

Integrations: REST APIs, WebSockets, HLS/Xtream streaming protocols, geolocation, push notifications, QR scanning and pairing, biometrics, PDF generation, TMDB

Security & Tools: Cisco CyberOps, CCNA, Identity and Access Management, credential sanitisation, timing-safe auth, Git, GitHub, Postman, testing

SELECTED PROJECTS

Khayyer - Food Donation Platform - Graduation Project - Funded by ITIDA

A bilingual Flutter application connecting food donors, charitable organizations, and registered recipients through donation, campaign, and coordination workflows.

Stack: Flutter, GetX, Firebase Authentication, Cloud Firestore, Firebase Storage, Geolocator

- Structured donor, organization, and recipient experiences with controller, repository, model, service, and view layers.
- Integrated authentication, Firestore records, media uploads, GPS donation capture, bilingual content, and notification setup.
- The graduation-project research scope covers AI food-quality checks and blockchain traceability; the public code snapshot focuses on the application workflow.

PSA Academy - Sports Academy Management & Analytics

A Flutter Web platform for administrators, coaches, and players, covering academy attendance, training, operational records, and reporting.

Stack: Flutter Web, Firebase, Provider, Cloud Firestore, QR scanning, PDF

- Built role-aware administrator, coach, and player workflows for attendance, training assignments, and work sessions.
- Implemented QR generation and camera scanning for attendance plus PDF report generation and browser downloads.
- Managed payment and expense records within an evolving layered architecture backed by Firebase services.

Padel System - Court Booking & Club Management Portfolio Prototype

A role-oriented Flutter prototype for court discovery, booking records, player activities, and venue-owner operations.

Stack: Flutter, Firebase, Cloud Firestore, GetX, Riverpod, Geolocator

- Organized player and venue-owner experiences into feature-oriented modules with a mixed GetX and Riverpod state approach.
- Implemented Firestore court discovery, search, and booking-record paths with location-aware dependencies.
- Demonstrated reservation, tournament, open-match, owner-dashboard, and administration workflows while clearly retaining simulated prototype boundaries.

EDUCATION

B.Sc. Computer Engineering | Arab Academy for Science, Technology & Maritime Transport | 2021 - Expected 2026

High School Diploma | Sidi Gaber Language School

SELECTED CERTIFICATIONS

- Flutter Diploma (Grade: 95%) - AMIT Learning
- Developing iOS Applications with Swift - ITI
- Quality Assurance - Techniques & Methodologies
- CCNAv7: Enterprise Networking, Security, and Automation - Cisco
- Identity & Access Management - Professional Diploma
- Artificial Intelligence: Basic Level - WE Certificate
- Project Management in Practice - Professional Diploma
- DevOps Engineering Diploma (2026) - Andalusia
- Developing Back-End Apps with Node.js and Express - IBM
- Cisco Certified CyberOps Associate (CBROPS) - NTI/Cisco
- CCNAv7: Switching, Routing, and Wireless Essentials - Cisco
- Database Technologies & Services - Professional Diploma
- Cloud Computing - Professional Certificate
